

# QTMART

## Queer and Trans Mathematicians in Algebra and Representation Theory

### Organizers:

Alice Dell'Arciprete (University of York); Alexis Langlois-Rémillard (University of Bonn);  
Dinushi Munasinghe (University of Toronto) and David Schwein (University of Bonn)

**Venue:** Lipschitz lecture hall · Mathematics Center · Endenicher Allee 60 · 53115 Bonn

**QTMART is a workshop on algebra and representation theory taken in a broad sense, run by and for queer and trans mathematicians. It aims to showcase the research done in this field by this community and bring together senior researchers, junior researchers, and graduate students to discuss topics of common interest in a non-competitive environment.**

**Alongside the workshop, an exploratory program on queer mathematics and inclusion will take place. The activities of the program will focus on exploring what it means to do mathematics as a queer or trans mathematician, and if there is such a thing as queer mathematics. It will also address the question of how to make the working culture and environment more welcoming and diverse, and will aim to initiate concrete actions in this regard.**

### Plenary Speakers:

- Chris Bowman (University of York)
- Ian Musson (University of Wisconsin-Milwaukee)
- J. Daisy Rock (FWO, KU Leuven, UGent)
- Beth Romano (King's College London)<sup>\*TBC</sup>
- Dani Tubbenhauer (University of Sydney)

This workshop welcomes talks by early-career researchers. Please indicate on the application form if you would like to give a talk and on what topic.

The event is open to everyone accepting the community agreement. However, priority in assigning talks will be given to self-identifying queer and trans mathematicians, and some activities in the program will be reserved for this group.

**Call for participation:** Participation is free. If you are interested in participating, please fill out the application form: <https://math-events.uni-bonn.de/event/104/>. To be considered, please submit a CV and research overview. To encourage the participation of researchers facing increased financial burden, such as many researchers from developing countries, a small number of funded places are available (including support for travel and/or accommodation). You can indicate in the application form, for which type of financial support you would like to be considered. Additional participants are welcome to join at their own cost.

**The deadline for applications to participate in the workshop is March 10, 2025 (CET).**
